TIMUR AKHMEDZHANOV

JUNIOR QA / SOFTWARE TESTER

Manual Testing | Web Testing | Technical Support | IT Background
Email: flosjar1@gmail.com | LinkedIn

PROFILE
Junior QA / Software Tester with an IT background in Information Security and Programming in Computer Systems. Experience includes website and software testing, issue reproduction and documentation, fix verification, technical website analysis, troubleshooting, and technical support. Interested in remote international QA opportunities.

Core QA Skills

- Manual and functional testing
- Regression and exploratory testing
- Web and cross-browser testing
- Bug reporting: steps to reproduce, expected vs. actual result
- Fix verification and retesting
- Test cases and checklists
- SQL / Microsoft SQL Server fundamentals
- Technical troubleshooting and support
- Web technologies and CMS experience
- Analytical thinking and attention to detail

Relevant Background

Freelance Software Tester (QA) | Jan 2026 - Sep 2026
Tested websites, web applications, and software products; reproduced and documented defects; verified fixes and explored new functionality.

SEO Specialist, Rocket Business | Mar 2025 - Jan 2026
Performed website audits, tested sites against search-engine requirements, monitored technical issues, analyzed traffic, and prepared technical requirements.

Technical foundation
Information Security degree (2025) and Programming in Computer Systems education (2021), including Microsoft SQL Server, web/CMS work, software configuration, and technical support.

Portfolio Sample 01 - Web Application Test Checklist

Portfolio exercise. The sample below demonstrates how I structure manual testing; it is not presented as commercial client work.

Scope: Login, registration, password recovery, navigation, and basic account behavior for a generic web application.

Area	Check	Priority
Authentication	Valid login credentials allow access to the account	High
Authentication	Invalid password shows a clear error and does not log the user in	High
Authentication	Required fields are validated	High
Authentication	Password field masks entered characters	High
Registration	Valid data creates an account	High
Registration	Duplicate email is handled correctly	High
Registration	Email format validation rejects invalid values	High
Password recovery	Reset request works for a registered email	Medium
Password recovery	Reset flow handles unknown email safely	Medium
Navigation	Main navigation links open the expected pages	Medium
UI	Layout remains usable on common desktop and mobile widths	Medium
Browser	Core flow is checked in at least two browsers	Medium
Session	Logout ends the authenticated session	High
Session	Protected pages are not accessible after logout	High

Exit criteria

- Critical authentication flows pass.
- No open blocker/critical defects in the tested scope.
- Major fixes are retested and regression checks are completed.

Portfolio Sample 02 - Test Cases

ID	Title	Precondition	Steps	Expected result	Priority
TC-01	Login with valid credentials	Registered active user	1. Open Login 2. Enter valid email/password 3. Click Sign in	User is authenticated and redirected to account page	High
TC-02	Login with invalid password	Registered active user	1. Open Login 2. Enter valid email + invalid password 3. Click Sign in	Login is rejected; clear error is shown; session is not created	High
TC-03	Registration with invalid email	Registration page is available	1. Enter valid required data 2. Enter invalid email format 3. Submit	Form is not submitted; email validation message is shown	Medium
TC-04	Logout and protected-page access	User is logged in	1. Click Logout 2. Use browser Back 3. Open protected URL	User remains logged out and is redirected to Login	High

Portfolio Sample 03 - Bug Reports

BUG-01 - Logout does not invalidate the session when using browser Back

Severity	High
Environment	Chrome / desktop
Steps to reproduce	1. Log in 2. Open account page 3. Click Logout 4. Press browser Back
Expected result	The account page should not be accessible after logout.
Actual result	Previously viewed authenticated content becomes accessible again.

BUG-02 - Registration form accepts an email without a domain suffix

Severity	Medium
Environment	Chrome / desktop
Steps to reproduce	1. Open Registration 2. Fill required fields 3. Enter user@example 4. Submit
Expected result	Invalid email format should be rejected with a validation message.
Actual result	Form accepts the value and proceeds to the next step.

Portfolio Sample 04 - SQL Checks

Illustrative queries for validating application data. Table/column names are generic.

Find a user by email

```
SELECT id, email, status
FROM users
WHERE email = 'tester@example.com';
```

Check duplicate emails

```
SELECT email, COUNT(*) AS total
FROM users
GROUP BY email
HAVING COUNT(*) > 1;
```

Verify recent orders for a user

```
SELECT id, user_id, status, created_at
FROM orders
WHERE user_id = 101
ORDER BY created_at DESC;
```

Education

Don State Technical University
Information Security | 2025

Rostov-on-Don College of Radio Electronics, Information and Industrial Technologies
Programming in Computer Systems | 2021

What I Can Contribute

- Clear and reproducible defect reports
- Structured manual testing of web products
- Careful retesting after fixes
- Technical communication with developers and support teams
- A strong learning mindset and an IT foundation that supports deeper QA growth
